accessfive

accessfive

access control solution

One of the first packaged access control solutions that integrates complex concepts in an environment extremely easy to learn and operate

design your users limits

AccessFive is the result of 3 years R&D using the usual NFive simplicity philosophy to integrate complex concepts to create a "packaged" Access Control software with a short learning curve and all the potential that you may require.

Fully compatible with HID Global™ networked access control solutions, AccessFive integrates VertX™ and Egde™ series devices seamless and effortlessly.*

Users

AccessFive lets you create groups of users, describe them, and define privileges and restrictions according to your work environment.

Zones

Divide you environment into well defined zones that you can cross check with groups or individuals to organize the Access rights.

Logs & Data Mining

Get statistics by person, time, zone or other indicators that you choose to obtain detailed information about your company's activity.

AccessFive advantages

- Fully integrated Access Control and Monitoring System
- High security level granted by the use of iCLASS® as well as biometrics technology
- Simple managing of diferent Access Control terminal types
- Easy managing system, from setup to full production
- Client/server architecture
- Networked platform, enabling the use of Remote Access Points.

Robustness

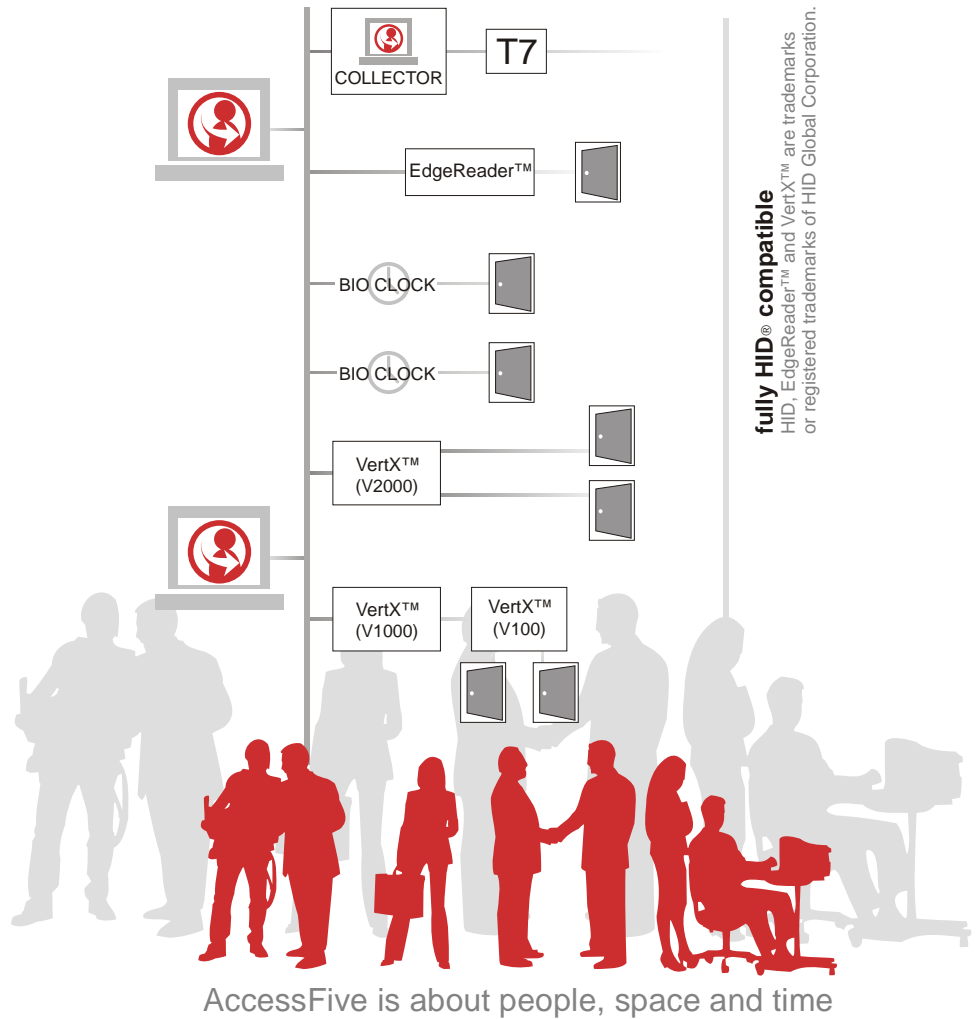

You will be working with an application with a very robust structure benefiting from NFive's more than 11 years of R&D.

Simplicity

NFive works hard to find the easiest and most productive way of doing things and this results in applications very simple to learn and operate that often move the market in new directions.

Reliability

AccessFive's frequent updates and new releases accompanying new trends and technology developments guarantee that your software will never be out dated.
