CardMaker II Manual Embosser

The CardMaker II is a compact manual embosser ideal for the personalisation of membership, loyalty, medical and ID cards.

It is operated by inserting a card into the unit and selecting the embossing start position and line to be embossed. This position is indicated on a dummy card mounted on the side of the unit. The characters to be embossed are then selected one at a time from the character dial and embossed by pulling the lever on the side of the unit.

Upto 50 characters including 0 to 9 in both small and large formats, A to Z and - / \$ & ` . , characters can be used.

The unit can be used on both plain and magnetic stripe cards including those with signature panels. It is ideal for personalising and enhancing the look of cards produced using a dye sublimation colour plastic card printer.
