RLL System - Easy Upgrades

Remote License Loader, developed by Nfive, uses the latest technology to load license upgrades or updates as well as plug-ins with an executable file (.exe), supplied by download or by email

Advantages

- No waste of time
- No further shipping expenses
- Fast and easy
- Downloadable by distributors from the DNZ - Dealer Network Zone

Optional plug-ins

UHF plug-in

Gen2 compliant UHF read/encode features on CardFive for robust and long read range for professional outdoor and indoor use. Implements the LLRP (Low Level Reader Protocol) for full reader control and adaptation. Define the settings and produce UHF cards, according to your reader/encoder features.

Face Snap

For professional photo badge production. Automatically identifies faces within a scenario, cropping them with 10% of surrounding area, and optimizing all images for total consistency of the production work. No need to work with an external application

Available to all cardfive editions

All rights reserved. Specifications are subject to change without prior notice. All other names and trademarks are property of their respective owners.

card five

Professional Card Design Software

Design your world in a card

Total environment integration

Design, manage, database and printing jobs in the same window.

Powerful imaging and design features

Integrate any image type, use transparency, cut-out-color, rounded corners and much more.

Database connections

From CSV to ODBC, the optimal solution for every database need.

Multi professional resources

Encode magnetic stripe, contactless cards, manage biometric devices to print or encode data from fingerprints, connect to any smartcard application to encode at print time, manage overlays, barcodes, variable objects and much more.

Printing speed and maximum error control

In addition to Windows drivers, more than 100 Internal drivers for the most popular card printers on the market.

Fast upgrades and easy stock management

With RLL technology upgrades are delivered immediately with no delays and no extra costs.

Identification has never been so easy

Applications

Employee ID's

Reliability

CardFive's frequent updates and new releases accompanying new trends and technology developments guarantee that your software will never be out dated.

Simplicity

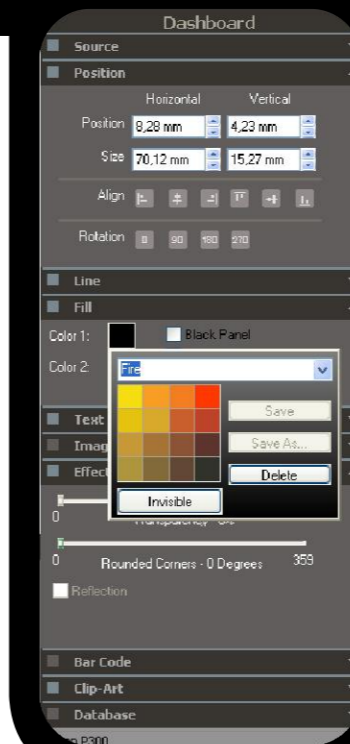

NFive works hard to find the easiest and most productive way of doing things and this results in applications very simple to learn and operate that often move the market in new directions.

Always Updated

You will be working with an application that has a very robust structure developed by NFive and continuously improved along more than 12 years.

With the Dashboard

You have real time results, all your tools are handy, and you see no pop-up windows over your work.

Easy and flexible features to manage all card design, printing needs, and encoding solutions.

Each CardFive edition addresses different market needs with different functions and prices, but all share the same philosophy: Simplify your work while giving you powerful tools to produce cards.

Database view

Concentrate on your data once your design is ready.

Effects

Easily apply creative effects to your images, like reflection, transparency and cut-out colors.

Colors

Manage colors in thematic swatches, fully editable.

clipart manager

Sort through thousands of clipart images and manage your own.

Imager

A powerful tool for image capture, editing, and improving image quality.

And much more...

Print job spooling,
Net licenses for additional workstations,
Database reports,
User management and level

CardFive is full of small details and capabilities. From applying special image effects, available to all CardFive editions, to printing differentiated cards, available only on CardFive Professional, there are thousands of features to discover.

Available in more than 10 languages, CardFive speaks your language.

DCL (Direct Command Language) Printers

Over comes Windows drivers limitations
