

Overview

The POP-Li range of cash drawer devices have been designed as a solution for clients who wish to open a conventional cash drawer without using the standard keylock or a host PC.

Loss of drawer keys, keys breaking and the lack of security surrounding an unattended key in a drawer causes a wide range of problems. Constant use of a key lock as the main opening method can invalidate the manufacturer's warranty as it is intended as an occasional use device, not the main method of opening the drawer.

The POP-Li offers a simple solution to this problem. To install, the device is mounted under the counter then

connected to any conventional printer driven type cash drawer. Power is supplied by mains PSU supplied with kit. To operate, the user simply presses the trigger button on the underside of the device and the drawer will open.

The security lock ensures that the trigger button is only active at times defined by a manager or supervisor. Each POP-Li is supplied with 2 keys and additional keys are available on request.

Order Codes:

POP-Li-S – Cash drawer trigger with security on/off key lock

PS60L – Mains PSU for POP-Li rang

Certificate No. 7739
